

### Production Management System

- A simple system for small and medium companies.
- The system defines a bill of material for each item.
- The system allows recording the work orders and their classification.
- The ability to tie the work's order with various cost centers.
- The ability to change the estimation of the work orders as necessary without restriction to the estimation of the main product.
- The work order is tied to the orders of payment and addition.
- The ability to tie the bills of exchange with a certain work order.
- The ability to control the inventory and to tie the required work with the actual balances in the various warehouses.
- Issuing a number of reports to follow up the work orders

### Industrial Cost Accounts

- The complete integration of general ledger, inventory management, and production.
- The identification of the service and production cost centers.
- The ability to reallocate the cost of the service cost centers on the production cost centers.
- The ability to use the standard prices for both material and products.
- Establishing the deviation entries automatically whether it was a deviation in quantity or a deviation in values.
